

DATA COOLING

A photograph of a data center aisle. On the left, there are several rows of server racks. The racks are dark, and the internal components are visible through perforated doors, illuminated by numerous small, colorful lights (blue, green, red). The perspective is from the end of the aisle, looking down its length. The right side of the image is a dark, solid background where the text is located.

In the European co-location and hyperscale data centre market, uptime and energy efficiency are absolutely critical to success. Marginal gains in this arena can make the difference.

Airedale have an unrivalled pedigree in providing flexible, high efficiency cooling solutions. Our systems approach and ability to combine hardware and software ensures that your data centre works smarter, not harder, to give you more cooling for less power and ensure a stable environment and availability 24/7.

Better by design

We innovate

We have a dedicated data centre solutions team who are driven by a desire to push the envelope of what has gone before every time they start a project.

We optimise air and water temperatures and squeeze every last kW of cooling we can from our world-leading product portfolio in order to deliver more cooling for less power and footprint.

We take enormous pride in what we do and are trusted by some of the world's most demanding applications.

We are Made in Britain

Airedale proudly manufactures in the UK out of a state-of-the-art manufacturing and R&D hub in Leeds and is supported by offices in London and Dubai, as well as a global network of partners and distributors. It is the values of quality British manufacturing which provides Airedale with a platform to compete on a domestic and global scale. We are part of the Modine group, a global leader in thermal management.

We have a strong focus on R&D and have, throughout our history, consistently been trailblazers for industry innovation around our core development pillars of leading-edge technology, energy efficiency and the environment.

We go further

Airedale understands that installing a cooling system is just the beginning. We support our equipment and our customers with maintenance, spares, training, upgrades, integrated systems testing, contingency planning and temporary equipment.

Our state-of-the-art software systems not only monitor your data centre systems, but also actively and continuously adjust their operating conditions to optimise energy efficiency, reliability and PUE.

FREE-COOLING CHILLERS
30–2000KW

PRECISION AIR CONDITIONING
DX/CW 16–500KW

IT COOLING IN-ROW/ON-ROW
3–67KW

SOFTWARE SOLUTIONS
BMS/HVAC OPTIMISATION/PMS

AIR HANDLERS/FAN WALLS
180–400KW

CONDENSERS/DRY COOLERS
3–1900KW

**COMPLETE SYSTEM DESIGN &
COMPLEX PROJECT MANAGEMENT**

**TAILORED MAINTENANCE
PACKAGES & TEMPORARY
SOLUTIONS**

**INDUSTRY ACCREDITED
HVAC TRAINING**

we are responsible

We are now living on a planet that runs on data. Connectivity underpins everything we do and the data centre industry is constantly evolving to keep up with not only demand, but also its environmental responsibilities.

At one end of the scale, data centres are getting larger, putting pressure on natural resources and supply chains. At the other end, technology advancements like AI are moving data processing nearer to the source, creating the need for flexible and powerful edge solutions.

With growth comes responsibility. As data centres consume an increasing share of natural resources, the industry must work together with its supply chain to minimise its impact on the environment without compromising on availability.

Airedale's cooling solutions are designed to work smarter, not harder. We are passionate about energy efficiency and optimise air and water conditions to provide best-in-class PUEs without the use of adiabatic cooling.

We offer a choice of low GWP refrigerants and our R&D ethos is to always strive for green, efficient solutions.

we are experts

The Airedale Data Centre Solutions Team has been assembled to push the boundaries of data centre cooling systems in an era where more has to be done with less.

More cooling, more reliability, more innovation, more support, more collaboration, more server power, more data, more optimisation.

Less power, less impact on the environment, less downtime.

We are cooling experts, we are data centre experts. Let's talk..!

”

Jonas Caino
Head of European Data Centre
Solutions, Airedale International

Airedale's manufacturing facility in Leeds is a one-stop-shop for leading edge HVAC solutions.

The facility features one of the largest and most extensive R&D centres in Europe as well as a training centre, sheet steel cutting plant, paint plant, coil plant, three production lines, test chambers and offices.
