- Carry out maintenance to ventilation, heating, mechanical and electrical systems.
- Carry out repairs to property, fixtures, fittings and equipment.
- Utilise BMS and Lighting control systems for energy management.
- Respond to machine breakdowns in a timely manner.
- Control contractors / issue work permits / observe work activities.
- On call rota for technical support with potential need to attend site in an emergency.

Job requirements

- Experience within a manufacturing environment desired but not essential.
- Able to prioritise tasks and have effective time management skills
- To have proactive attitude with initiative to drive team successes.
- Strong work ethic and ability to work unsupervised.
- Experience and Competence with health, safety, and environmental requirements.
- Professional conduct when dealing with colleagues, visitors and contractors.
- Eager to learn and advance skills and knowledge with willingness to attend training to attain relevant qualifications when required.
- To have key involvement in new installations and alterations to plant.
- Willingness to learn machine operations and assist with repairs.
- Required to be flexible with work hours to rectify breakdowns as priorities and demands dictate.

Experience, Skills and Qualifications

- BS7671 - 18th Edition Wiring Regulations Qualified or recent standard.
- City & Guilds, BTEC or NVQ equivalent in Electrical Installation Level 3.
- IPAF 3a & 3b MEWP licence or willing to obtain qualification.
- Experience in Plumbing / Heating / Ventilation systems is desirable
- Experience in using BMS (BEMS) and lighting control systems.
- Knowledge of legislation related to H&S, Environment and Building Regulations.
- Mechanical experience would be advantageous with knowledge of machinery.

Training will be provided for the right applicant to develop the skills & knowledge required for the position.

Applications should be made in writing with an up to date CV to HR by 16th April 2021
