

ACIS™ BMS

Intelligent Building Management System

Smart, scalable solutions for critical cooling environments

Unified Control

Energy Efficiency

Customized Alerts

Secure & Stable

ACIS™ BMS

Intelligent Building Management System

Experience a scalable, future-proof solution that enhances system performance, reduces operational costs, and provides comprehensive monitoring over your building services.

Key Features & Benefits

HVAC Expertize

50+ years' experience in critical cooling air conditioning allows ACIS to go far beyond other BMS solutions in selecting optimized operating conditions for HVAC systems.

Power Management System

ACIS can monitor your facility's power infrastructure and provide insights into usage and faults.

HVAC Optimization

ACIS can monitor your facility's power usage, with inbuilt diagnostic tools that enable users to pinpoint areas of improvement.

Compatibility

ACIS is open protocol, allowing for third-party system integration.

Single Pane of Glass

ACIS provides BMS, PMS (power management system) and EMS (energy management system) information in a fully customizable single dashboard.

Data

ACIS can provide live data on metrics such as PUE (power usage effectiveness), tailored to end-user requirements.

Security

ACIS complies with the latest cyber-security protocols, strengthening your facility against incursion.

Sequence of Events

ACIS can timestamp power events within 10ms, allowing for greater accuracy when determining root cause of outages.

User Experience Focused

Designed for ease of use and customer engineered to suit unique user requirements.
